

Wesley Homes

The Challenge Wesley Homes offers a comprehensive network of housing and services including residential homes and apartments, adult day care, assisted living, home health care, restorative therapies, and skilled nursing care. The security and safety of their residents was a top priority. Wesley Homes needed a security camera system that would monitor activity and centralize the operations to provide an additional level of safety for their communities.

The Solution Service Communications Inc. (SCI) provided Design-Build support for a new Pelco Closed Circuit Television (CCTV) system. SCI's certified system engineers led the effort to design and specify the proper solution that fit the customer's needs. SCI's trained system technicians installed and fully tested the new system to ensure proper placement and working condition. Coaxial cables were installed throughout the campus, connecting cameras to network switches over Ethernet and integrated with the Wesley Homes network equipment. System management was centralized in order to monitor activity and improve emergency response times.

The Results SCI installed over (100) security cameras across multiple sites. Cameras were installed at entrances and exits of each facility. Additional cameras were installed in parking lots, high traffic areas and around the main thoroughfare that runs through the properties. Ultimately, SCI was able to meet the security needs and cost requirements of Wesley Homes.

Client Testimonial "Safety and security are a top priority at Wesley Homes, so getting a security system in place was an extremely important project. SCI presented the best game plan on how to meet our needs and minimize costs, and they delivered. SCI did exactly what they said they would do and in some cases, the installers went above and beyond."
- Sean Rogers, Director of Environmental Services, Wesley Homes

About SCI

Service Communications Inc. provides installs and supports voice, data, security and cabling systems. SCI's 20 year expertise offers the single source solution that has successfully integrated the network infrastructure needs for the retail, financial, healthcare, education and government sectors, among others.
